
WEBBING IN SPACE, Vibhor Sogani

Suspended in the large glass clad atrium of Cairn India Ltd., spanning the verticality of six storeys, Vibhor Sogani's light installation is a complex network of interconnected elements. Following an organic pattern of growth, the numerous metal bars lit from both ends form a 50' long LED based piece of art. The delicate intricacy of the light feature softens the hefty steel framework of the building. Juxtaposed exquisitely against the rigid and robust exposed steel structure, the fine and precise spokes of the Web draws the eye not only from the mutiple lobbies that it crosses; but also commands compelling attention from the Gurgaon highway that wraps around the building. Looking up into the atrium, the sharp shards of light seem like an illuminated explosion of the perfect crystal.
